Demo Day — Speaker Notes

Fourteen slides, the timing for each, and the lines worth saying word for word.

Vertex ERP for Shahjalal Islami Bank PLC · prepared by Harvest Partners (HK) Limited · 20 September 2026

Before you walk in

Laptop on mains power. Screen sleep off, notifications off. One Chrome window, no other tabs, 100% zoom. `npm run demo`, then `npm run warm`, then `npm run reset` last so you start clean.

Turn the wi-fi off

— nothing needs it, and that removes the venue network as a risk.

The fourteen slides

#	Slide	Clock	What to do
1	Title	0:00	Do not open with architecture. Open with their problem. Shake hands, name the three firms, move on within two minutes.
2	A purchase today starts on paper	0:00 — 3 min	Say this slowly. You are describing their working life back to them. If they nod here, the rest of the meeting is easy.
3	Three firms, one delivery team	0:03 — 2 min	Ninety seconds. They already have the corporate documents. Do not read the slide.
4	How we will use the next fifty minutes	0:05	Point at the 22 minutes. Say: most of this meeting is the working system, not slides.
5	LIVE — one purchase, start to finish	0:05 — 22 min	Switch to the browser here. Do not come back to slides until the audit chain has been verified. Answer questions by clicking, not by talking.
6	Five controls the system enforces absolutely	0:27 — 4 min	This is the slide for the IT Division. If they remember one thing, it should be that the refusals happen in the data layer.
7	All 25 modules, mapped line by line	0:27	If asked for detail, offer the line-by-line mapping afterwards. Do not read 298 rows on a projector.
8	Your specification never mentions Shariah	0:31 — 5 min	Never say the software knows Shariah. Say: we built the mechanism, your Committee owns the judgement.
9	We added seven tests you never asked for	0:31	This is the slide that answers “why are you not the cheapest bid”. Let the ₳ 1,22,53,546 sit for a moment before you speak again.
10	More than we quoted, at the price we quoted	0:36 — 4 min	Deliver this warmly but do not open the scope wide. The phrase is: no change to the licence price, sequenced into the roadmap.
11	Sixty to ninety working days, in seven steps	0:36	The line to land: if it is going wrong you will know in week four, not week twelve.
12	Three things from your side	0:40 — 2 min	Ask for the payment provider decision explicitly. It is the one item that can stall the project and it is entirely in their hands.

13	We are not the lowest bid	0:42	Say the first line out loud and without apology. They already know you are not cheapest.
14	Thank you	0:42 — open-ended	Leave this on screen for questions. Do not go back through the deck.

Lines worth saying word for word

These are the moments where the exact wording matters. Everything else you can say your own way.

The refusal, maker-checker

“That refusal did not happen in the browser. It happened inside the database transaction that would have made the change. There is no route around it — not through the interface, not through the API, and not as an administrator.”

The sealed envelope

“Financial offers cannot be read by anyone, including us and including an administrator, until technical evaluation is complete. That is clause 1.9 of your own tender document.”

After the disqualified bidder turns out cheapest

“And there it is. The bidder we just disqualified was the cheapest. We did not know that when we disqualified them.”

The work order refusal

“Quantities cannot drift between approval and purchase. The system told you it would refuse this, before we tried it.”

The workflow builder

“No code was written, no change request was raised, and we were not involved. And it saves as a new version — anything already in approval keeps the rules it started under.”

Shariah, the sentence that must not go wrong

“This system contains no Shariah rulings and makes none. It holds the rules your Committee issues, applies them mechanically, and refers what they catch back to your Committee.”

If asked what it is built on

“The demonstration is condensed to a single portable node so it runs on a laptop with no network. The production build follows the three-tier architecture and the stack quoted in Annexure-A.”

If asked whether it is live anywhere

“No. This is a working demonstration of the system we proposed. The workflow engine, the permission model, the two-envelope control and the audit trail are real and enforced.”

If something goes wrong

What happens	What you do
A screen misbehaves	Every register is reachable from the sidebar and none depends on the live thread. Move on, come back later.
Creating the requisition fails	REQ/CSD/2026/0845 is already sitting in Farhana’s queue, raised by Rezaul, identical in every respect. The maker-checker moment works exactly the same on it.
The tender is in the wrong state	<code>npm run reset</code> — five seconds, safe while the app is running. Refresh the page afterwards.
You are running out of time	Cut in this order: the invoice approval chain, the vendor portal, the comparative statement, goods receipt. Never cut: the maker-checker refusal, the sealed envelope, the work order mismatch, the workflow builder, the audit trail.

The five moments, if you only have five minutes

The self-approval refusal · the sealed price refusal · the over-quantity work order refusal · the workflow builder redrawing live · the audit chain verifying green.
