

VERTEX ERP

ERP Software with an integrated workflow system

Built for Shahjalal Islami Bank PLC · Common Services Division

Demonstration · 21 September 2026

U Fintech · Harvest Partners · Nascenia

WHERE WE STARTED

A purchase today starts on paper

Before we built anything, we walked the process Common Services runs now.

- 1 A request begins on paper and moves between desks.** Nobody can say where it is without telephoning.
- 2 Approval limits live in a policy document.** Whether they are followed depends on people remembering.
- 3 Nobody can see the store from the requisition.** The Bank buys what it already owns.
- 4 Nobody can see what was paid last time.** Prices drift upward and nothing notices.
- 5 Records sit in files across divisions.** Six months of procurement history is a two-week manual job.

None of this is a failure of the people. It is what happens when the process has no system underneath it.

WHO IS DELIVERING THIS

Three firms, one delivery team

One contract, one project manager, one technical account lead — named from day one.

1

U Fintech

BANGLADESH

Local delivery partner. Commercial and contractual presence in market, and the Bank's first point of contact.

2

Harvest Partners

HONG KONG

Product engineering. The workflow engine, the controls, the audit chain and the application you are about to see.

3

Nascenia

BANGLADESH

Engineering capacity and long-term local support, so the Bank is never dependent on a single office.

Bidder qualification, experience certificates and corporate documents are as submitted with the technical bid.

TODAY

How we will use the next fifty minutes

Most of it is the system itself. We would rather show you than describe.

0:00	Where we started	3 min
0:03	Who is delivering this	2 min
0:05	Live demonstration — one purchase, start to finish	22 min
0:27	Coverage against Annexure-A and Annexure-B	4 min
0:31	What we built beyond the specification	5 min
0:36	Delivery after the work order	4 min
0:40	What we need from you	2 min
0:42	Your questions	open-ended

LIVE

One purchase, start to finish

Five people. A requisition, a tender, three bidders, a work order, a delivery and a payment — on this laptop, with the wi-fi switched off.

WHAT YOU JUST SAW

Five controls the system enforces absolutely

Not policy. Not a setting someone can turn off. Refused inside the transaction that would have made the change.

- 1 Maker-checker** The person who raises a document can never approve it — including as an administrator.
- 2 Two-envelope seal** A bidder's price cannot be read until technical evaluation is complete. RFQ clause 1.9.
- 3 Quantity matching** A work order cannot exceed the quantity the requisition approved.
- 4 Three-way match** An invoice can only bill what was received and accepted, at the ordered price.
- 5 Tamper-evident audit** Every record is locked to the one before it. Any edit or deletion is detectable.

52 automated control tests · 99 screens checked · the full sequence above re-run in a real browser before every release

All 25 modules, mapped line by line

We went back through your own Annexure-B and mapped every sub-feature to what exists today.

25

of 25 modules
addressed

298

sub-features mapped
to your document

222

with a working screen
behind them today

74%

of the written scope,
built and testable

Running end to end — you can perform the action now

On screen — real data, action wired during implementation

Scheduled for the build phase

Declared in our bid as needing customisation

The twelve customisation items are the ones we declared honestly in the bid rather than claiming. They have not changed.

Your specification never mentions Shariah

Across the RFQ, Annexure-A and Annexure-B, the word does not appear once. We built for it anyway.

What we built

- The Shariah Supervisory Committee as an approval authority in its own right
- Screening of vendors, contracts and work orders against the Committee's own rules
- Islamic contract structures per agreement — Murabaha, Ijarah, Istisna, Salam
- Halal certification tracked against canteen supply
- A permanent decision record, written to the audit trail under the member's name

The position we take

This system contains no Shariah rulings and makes none.

It holds the rules your Committee issues, applies them mechanically, and refers what they catch back to your Committee for a human decision.

No other role can record a decision on the Committee's behalf — not even the system administrator.

Eight Committee rules · eleven documents awaiting decision · every rule cites the minute that created it

The rule set shipped in this demonstration is illustrative. Your Committee's own would replace it during implementation.

We added seven tests you never asked for

Your specification asks us to record procurement. It never asks us to examine it. These run over what you already record.

- 1 Split purchase**
Several small orders that together cross an approval limit
- 2 Price drift**
Paying materially more than this Bank has paid before
- 3 Concentration**
How much of your spend sits with one supplier
- 4 Bid clustering**
Bids arriving suspiciously close together in price
- 5 Repeat winner**
One supplier winning an unusual share of tenders
- 6 Rapid approval**
Approved too quickly for anyone to have read it
- 7 Single bid**
An open tender that drew no competition

Running against
this demonstration

7

questions raised

↳ **1,22,53,546**

under question

Every finding is a question, not an accusation. Each one has an innocent explanation available and the wording says so. The system puts the question in front of a person with the evidence attached — it does not decide.

No new data capture. No extra work for anyone. No integration. It runs on procurement you already record.

OUR COMMITMENT

More than we quoted, at the price we quoted

Everything in Annexure-A and Annexure-B is fixed scope at the price already submitted. These are in addition.

Already built, and neither was requested: Shariah governance · Procurement integrity

And these we will build into the delivery roadmap at no change to the licence price:

Supplier screening

Run your vendors through the same sanctions, PEP and CIB checks you already run on customers.

Inspection pack

One button: every procurement decision in a period, with approval chains, ready for Bangladesh Bank.

Read-only auditor access

Internal and external audit see everything, change nothing, and stop asking IT for exports.

Vendor performance scoring

Delivery punctuality, rejection rates and penalty history, scored automatically.

Budget commitment view

Committed but not yet invoiced — the number Finance needs and rarely has.

Internal assistant

Ask your own procurement policy a question and get the answer with the clause it came from.

Tell us which matters most and we will sequence it first. We would rather agree the order than sell you modules.

AFTER THE WORK ORDER

Sixty to ninety working days, in seven steps

You see a running system in week three, and again every fortnight after that.

1	Kick-off	Week 1	Everyone in one room. We ask who owns each decision.
2	Your rules, configured with you	Weeks 1-3	Your policy and delegation matrix, entered in the builder you just saw, signed off before anything is locked.
3	Build and configure	Weeks 3-8	The demonstration becomes your system. It is the foundation, not a throwaway.
4	Integration	Weeks 6-10	CBS, HRMS, DMS, e-mail, SMS and IAM through the middleware tier. Each tested alone first.
5	Your data moves in	Weeks 8-11	Vendors, contracts, assets, stock, budgets. You hand us your lists — nobody retypes years of records.
6	You test it	Weeks 10-12	A separate UAT environment, with acceptance criteria agreed in advance.
7	Training and go-live	Weeks 12-13	Three streams: IT Division, Common Services, branch and head office. Then division by division.

Then twelve months of warranty: 24×7 helpdesk, SLA-backed response, and any change a regulatory shift requires at no cost.

TO START

Three things from your side

Nothing here is onerous, and two of the three are documents you already have.

1 People, for three weeks

Not much of their time — but the right people. Whoever owns the procurement policy, the delegation of authority, and CBS access.

2 Your documents and access

The procurement policy as it actually stands, the delegation matrix, and credentials for CBS, HRMS and the gateways.

3 One decision

Your payment service provider. This is the single item genuinely blocked until you choose, and it affects six modules.

IN CLOSING

We are not the lowest bid. Here is what you get instead.

1 A system that refuses

Every control you saw is enforced in the data layer, not written in a manual. That is the difference between a policy and a guarantee.

2 A vendor who read your business

Nobody asked us for Shariah governance or procurement integrity. We built both because you are an Islami bank that buys things.

3 Independence by design

Your workflows, your reports, your roles, your rules. Full documentation handover. You are never locked in to us.

4 More than quoted, same price

Two modules already delivered beyond scope, and six more sequenced into the roadmap at no change to the licence price.

Thank you

We would rather answer questions than present. Ask us anything, including the parts we have not built yet.
